The Ultimate in remote spa control

The SmartLink WiFi module and SpaLink app allow you to connect to and take control of your spa remotely from any location at any time. The SmartLink module connects to any model SV controller and then uses your home WiFi network to facilitate communication between the app server and the spa. The SpaLink app becomes a mobile, wireless remote for your spa enabling complete control of all settings and accessories including pumps, blowers and LED lights.

MySpaPool voice control

Link your SpaLink app to either Amazon Alexa, Google Assistant or both, with our MySpaPool voice control skill. Using simple commands such as "Ask my spa pool, set temperature to 39°C" or "Ask my spa pool, start my spa" or "Ask my spa pool, set operating mode to Away" you have complete control of your spa via voice commands.

Your spa's mobile remote control

Wouldn't it be nice to control your spa from your couch, or as you head home from a stressful day at work, or as you walk out of the gym, knowing your spa water is refreshed, at temperature and ready for you to just sink in. The SmartLink module gives you that convenient, fingertip control to command your spa when you want and how you want to suit your lifestyle.

Adjust your spa settings remotely

There is no point consuming energy heating or filtering for long periods on days or times where you will not be using the spa. Significant power savings can be achieved by adjusting your spa's settings to suit your usage patterns. The SmartLink module unlocks these opportunities by giving you fast, simple and convenient access to configure your spa from anywhere at any time.

Global remote technical support

The SmartLink module provides you with the ability to seek remote technical assistance from anywhere around the globe. If you require assistance and you choose to activate the support PIN within the SpaLink app, you can provide SpaNET or your spa reseller with access to securely login and check or adjust all software settings, control and test your spa accessories, monitor real-time diagnostic information or even data log the spa.

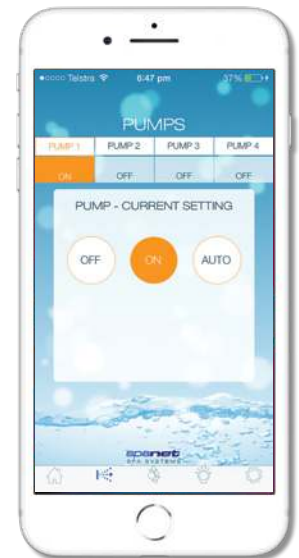

Push Notifications

Keep informed about the health of your spa with status updates direct to your phone even if the SpaLink app is not open. Push notifications will alert you of any change to the health status of your spa, and the app will clearly describe what the issue is and provide simple steps and solutions to resolve.

Home Status Screen with Temperature Adjustment

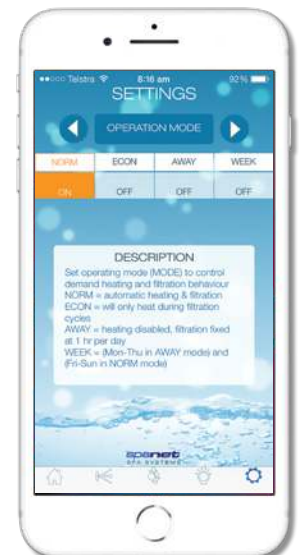

Take Full Control of your Pumps

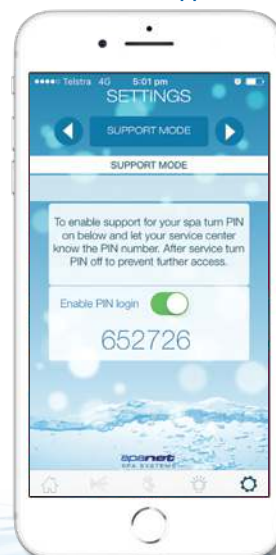

Set the mood with LED Lighting Effects

Adjust Heating Mode when spa not in use

Activate Support Pin for Global Remote Technical Support

Push Notifications for spa health status updates
